

Innovation for IPM: new approaches, tools and emerging technologies

Convener: Maurizio Sattin
Consiglio Nazionale delle Ricerche
Italy

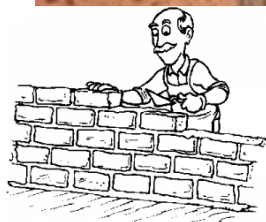

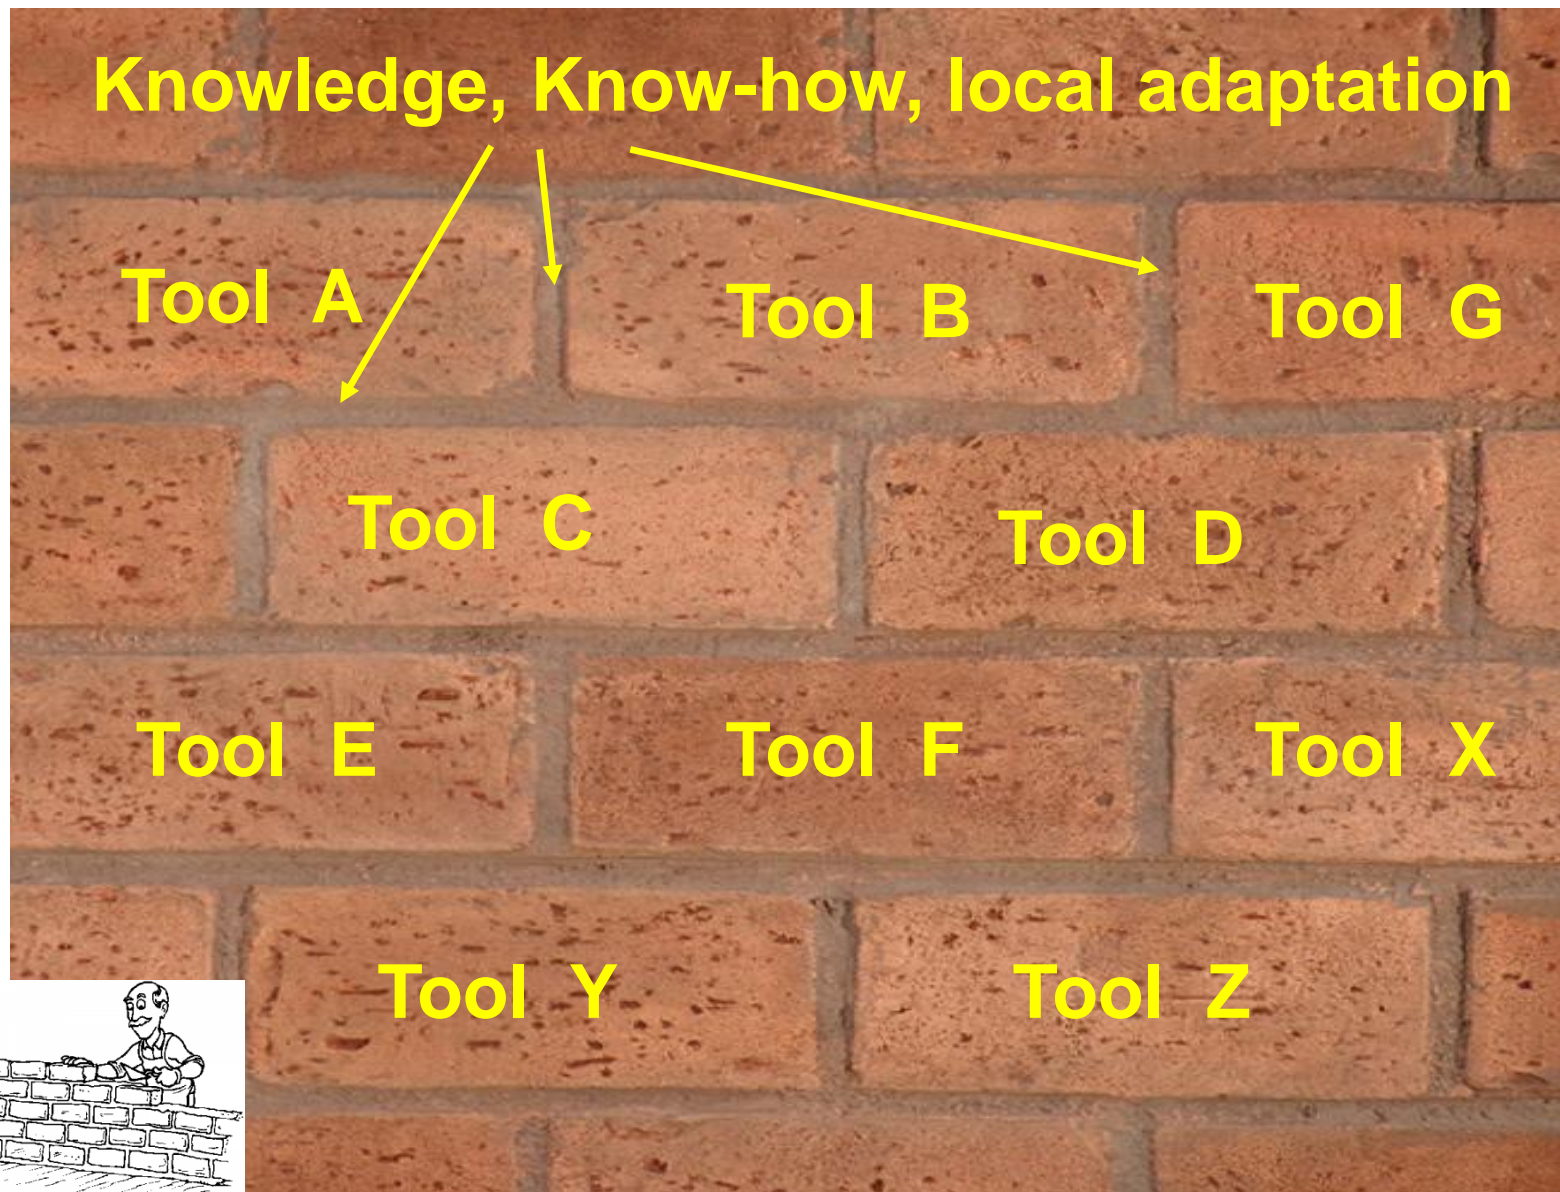

- Often excellent and innovative research related to the IPM issue, but lacking multidisciplinary and system approach
- Long-established concepts (IPM, ICM, PRM)
- Some field scale validation

European agriculture at large has become highly dependent on chemical pesticides

Innovation:

- requires research as well as organisation and management
- is influenced by social and economic factors
- research has to be better translated into innovation at farm and landscape level
- little information on the effects of combined tools
- IPM: based on general principles locally adapted

The IPM wall

Panel discussion – Innovation for IPM: new.....

Title of the presentation

Speaker

Introduction

M. Sattin

Innovative diagnostic tools and precision spraying

C. Zijlstra

Can we have user friendly DSS, especially for weed control?

P. Rydhal

Microbioal Biocontrol Agents (MBCAs) as tools for IPM implementation

M. Ruocco

Exploitation and management of plant genetic resistance as key elements of durable IPM

C.-E. Durel

The potential of landscape management in IPM

C. Lavigne

Recap and debate

All + audience

ENDURE's virtual laboratory and associated research tools

I. Denholm
